

Note for users of Google Chrome

The Google '**Chrome**' browser has a built-in PDF reader that doesn't support JavaScript. In order for the Plumtree Interactive Churchyard to work correctly you will need to disable the browser's built-in PDF reader as follows:

- Open a new tab.
- Type **about:plugins** into the Address bar/Search box; a list of installed plugins is displayed
- Locate the entry for the **Chrome PDF Viewer**
 - If it has the text (Disabled) appended to the entry, you need do nothing
 - If it does NOT have the text (Disabled) appended to the entry, click on the word **Disable** below the entry
- Locate the entry for Adobe Acrobat <version number>:
 - If it has the text (Disabled) appended to the entry, click on the word **Enable** below the entry.
 - If it does NOT have the text (Disabled) appended to the entry, you need do nothing.

The Plumtree Interactive Churchyard should then work normally.
